CLAIMS

9. A system for enabling communication between users over a communication network, the system comprising;

a server system associated with a database comprising verified data relating an individual, said server system being configured and operable to verify at least some of the data so as to authenticate an identity of the individual;

determining a level of reliability in authenticity based on correspondence between data on said individual entered by a plurality of related individuals; and

the system being configured to define one or more levels of permitted communication between individuals in the database and the verified individual on the basis of said verification.

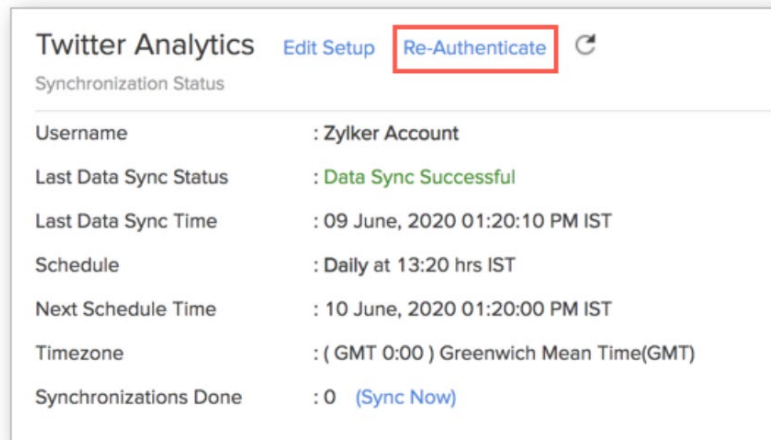

Row	Claim Element	Contention
9.0	9. A system for enabling communication between users over a communication network, the system comprising;	<p><i>Plaintiff contends that Zoho Cliq is a system for enabling communication between users over a communication network.</i></p>  <p><https://www.zoho.com/cliq/team-collaboration.html> © 2024</p> <p>Saved 18 times between May 24, 2020 and July 3, 2024.</p> <p>2 2013 2014 2015 2016 2017 2018 2019 2020 2021 2022 2023 2024</p>
9.1	a server system associated with a database comprising verified data relating an individual,	<p><i>Plaintiff contends that Zoho Cliq has a server system ["Zoho Analytics server"] associated with a database ["local/hosted database"] comprising verified data relating an individual ["members of an organization"].</i></p> <p><i>For example, Zoho Cliq comprises a server system called Zoho Analytics server, which stores electronic record of individuals, etc. in a database. "members of an organization" means that each member has verified data by definition.</i></p>

Zoho Databridge is a lightweight independent utility that bridges your on-premise data source and Zoho Analytics server to enable easy data import. You can also automate the import process to synchronize the data from your local /hosted database into Zoho Analytics at a periodic interval.

9.4

the system being configured to define one or more levels of permitted communication between individuals in the database and the verified individual on the basis of said verification.

*Plaintiff contends that Zoho Cliq's system is configured to **define one or more levels of permitted communication** ["**channel permissions**"] between **individuals in the database** ["**local/hosted database**"] and the **verified individual** ["**members of an organization**"] on the basis of said **verification** ["**account will be successfully authenticated**"].*

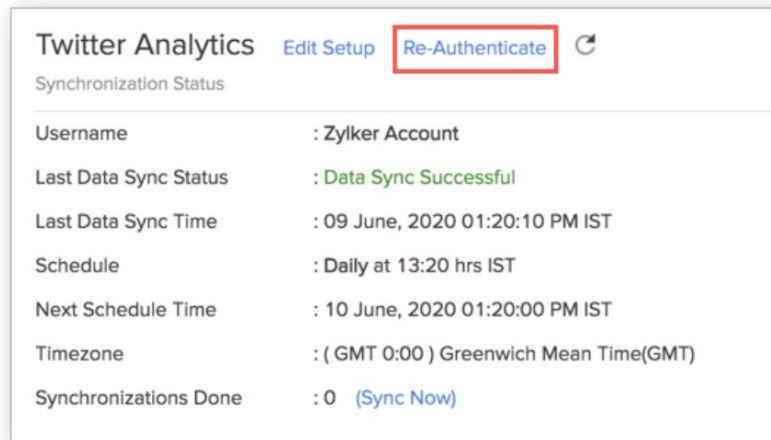

For example, company's President & CEO (top individual) communicates with other individuals in the same company. All individuals in the company are verified by definition. However, the bottom-level employees may not be permitted to communicate directly with company's President & CEO.

Zoho Databridge is a lightweight independent utility that bridges your on-premise data source and Zoho Analytics server to enable easy data import. You can also automate the import process to synchronize the data from your local /hosted database into Zoho Analytics at a periodic interval.
